most of the model theory of modules works with only minor modifications in much more general additive contexts such as functor categories categories of comodules categories of sheaves furthermore even within a given category of modules many subcategories form a self sufficient context in which the model theory may be developed without reference to the larger category of modules the notion of a definable additive category covers all these contexts the imaginaries language which one uses for model theory in a definable additive category can be obtained from the category of structures and homomorphisms itself namely as the category of those functors to the category of abelian groups which commute with products and direct limits dually the objects of the definable category the modules or functors or comodules or sheaves to which that model theory applies may be recovered as the exact functors from the small abelian category the category of pp imaginaries which underlies that language

this book presents 15 tutorial lectures by leading researchers given at the 11th edition of the international school on formal methods for the design of computer communication and software systems sfm 2011 held in bertinoro italy in june 2011 sfm 2011 was devoted to formal methods for eternal networked software systems and covered several topics including formal foundations for the inter operability of software systems application layer and middleware layer dynamic connector synthesis interaction behavior monitoring and learning and quality assurance of connected systems the school was held in collaboration with the researchers of the eu funded projects connect and eternals the papers are organized into six parts i architecture and interoperability ii formal foundations for connectors iii connector synthesis iv learning and monitoring v dependability assurance and vi trustworthy eternal systems via evolving software

this handbook distils the wealth of expertise and knowledge from a large community of researchers and industrial practitioners in software product lines spls gained through extensive and rigorous theoretical empirical and applied research it is a timely compilation of well established and cutting edge approaches that can be leveraged by those facing the prevailing and daunting

challenge of re engineering their systems into spls the selection of chapters provides readers with a wide and diverse perspective that reflects the complementary and varied expertise of the chapter authors this perspective covers the re engineering processes from planning to execution spls are families of systems that share common assets allowing a disciplined software reuse the adoption of spl practices has shown to enable significant technical and economic benefits for the companies that employ them however successful spls rarely start from scratch but instead they usually start from a set of existing systems that must undergo well defined re engineering processes to unleash new levels of productivity and competitiveness practitioners will benefit from the lessons learned by the community captured in the array of methodological and technological alternatives presented in the chapters of the handbook and will gain the confidence for undertaking their own re engineering challenges researchers and educators will find a valuable single entry point to quickly become familiar with the state of the art on the topic and the open research opportunities including undergraduate graduate students and r d engineers who want to have a comprehensive understanding of techniques in reverse engineering and re engineering of variability rich software systems

the focus in development methodologies of large and complex software systems has switched in the last two decades from functional issues to structural issues this holds for both the object oriented and the more recent component based software engineering paradigms formal methods have been applied successfully to the verification of medium sized programs in protocol and hardware design for quite a long time however their application to the development of large systems requires more emphasis on specification modeling and validation techniques supporting the concepts of reusability and modifiability and their implementation in new extensions of existing programming languages like java this state of the art survey presents the outcome of the 9th symposium on formal methods for components and objects held in graz austria in november december 2010 the volume contains 20 revised contributions submitted after the symposium by speakers from each of the following european ist projects the fp7 ist project avantssar on automated validation of trust and security of service oriented architectures the fp7 ist project deploy on industrial deployment of advanced system engineering methods for high productivity and dependability the esf cost action ic0701 on formal verification of object oriented software the fp7 ist project hats on highly adaptable and trustworthy software using formal models the fp7 sst project iness on an integrated european railway signalling system the fp7 ist project
